and the slowdown in deforestation. Soy Agriculture in the Amazon Basin | Global Forest Atlas While the Soy Moratorium has largely succeeded in slowing soy-driven deforestation in the Brazilian Amazon, some of that deforestation impact now appears to be moving southward into the Cerrado and the Gran Chaco, bioregions not protected by the moratorium. Despite successes, challenges remain Soybeans | Union of Concerned Scientists In the 2000s, soy production, in combination with cattle ranching, has resulted in high rates of deforestation in the Brazilian Amazon, which reached an average rate of 1,950,000 ha cleared per year from 1996 to 2005. Forestland is generally first cleared for cattle ranching, and

pastures are in turn replaced by soy farms. Soy Agriculture | Global Forest Atlas The largest share of the deforestation attributed to crop imports in the EU is derived from oil crops, mainly soy. Thus, based on the correlation between deforestation and cropping areas described above, soybean cakes and soybeans were responsible for 60 per cent of deforestation linked to EU crop imports. Agriculture and deforestation - FERN The Soy Moratorium was the first agreement in the tropical forest, signed by major agro-business traders (e.g., three companies, Cargill, ADM, and Bunge, control more than 60% of finance, production, and trading of soybean in Brazil) to stop purchasing soybean grown on lands deforested after July 2006. Spillover

to prevent and control deforestation in 2004. Policy change, land use, and agriculture: The case of soy ... New research by university and NASA scientists suggests that deforestation of the Amazon for soy production has declined under the moratorium. However, as the moratorium was only applicable to the Brazilian Amazon, a very different scenario has been playing out in neighboring savanna-woodland areas known as Brazil's Cerrado. Soybeans in the Brazilian Cerrado Deforested land is used predominantly to produce meat for distal consumption either through cattle ranching or soya bean for livestock feed. Deforestation declined dramatically in the latter part of the decade through a combination of market forces,
