Iterative design is a design methodology based on a cyclic process of prototyping, testing, analyzing, and refining a product or process. Based on the results of testing the most recent iteration of a design, changes and refinements are made. This process is intended to ultimately improve the quality and functionality of a design.

Customer Experience Optimization & Personalization

Scalability testing measures performance based on the software's ability to scale up or down performance measure attributes. For example, a scalability test could be performed based on the number of user requests. Capacity testing is similar to stress testing in that it tests traffic loads based on the number of users but differs in the amount

Designing Primers for a qPCR Assay. When designing primers, follow these guidelines: Design primers that have a GC content of 50–60%; Strive for a T_m between 50 and 65°C. One way to calculate T_m values is by using the nearest-neighbor method. Use this online T_m calculator, with values of 50 mM for salt concentration and 300 nM for oligonucleotide concentration

Testing Is the Way to Success! A/B testing on Facebook is used to experiment with different campaign elements to find out what works best. Sadly, in the real world, there's no magical shortcut to knowing what's the best-performing ad design, offer or target audience. And that's when A/B testing Facebook ads enters the game.

What is Performance Testing?

Conventionally, design optimization can be carried out for such a problem by either performing a multiobjective optimization or by using constraints to limit the shaft power and to maximize the output power. We utilized a mathematical function that was a combination of a target efficiency (95%) and a target power requirement as an objective

Split Testing, Optimization and Market Feedback Platform

Peephole optimization is a type of Code Optimization performed on a small part of the code. It is performed on the very small set of instructions in a segment of code. The small set of instructions or small part of code on which peephole optimization is performed is known as peephole or window.. It basically works on the theory of replacement in which a part of code is replaced by shorter and
