REVIEW OF DIFFERENTIATION Differential Equations. A Differential Equation is a n equation with a function and one or more of its derivatives:. Example: an equation with the function y and its derivative dy/dx . Solving. We solve it when we discover the function y (or set of functions y).. There are many "tricks" to solving Differential Equations (if they can be solved!).But first: why? Dennis G Zill Solutions | Chegg.com Differential equations have a derivative in them. For example, $dy/dx = 9x$. In elementary algebra, you usually find a single number as a solution to an equation, like $x = 12$. But with differential equations, the solutions are functions. In other words, you have to find an unknown function (or set of functions), rather than a number or set of numbers as you would normally find with an equation ... Differential Equations
