concerns. For example, Disease and Nematode Management in Field Crops This past year has been a prime year for the development of many common vegetable diseases. Even in fields where farmers implemented recommended Integrated Pest Management (IPM) practices, many crops still became susceptible to common diseases due to the wet weather and environmental conditions favorable for disease development that have persisted. Fall Best Management Practices to Reduce Disease Issues in ...

- Disease control: The disease is internally seed borne and as such spray of fungicides is not effective in controlling the disease.
- Seed treatment
- Use of resistant varieties: The most successful method is the use of resistant

varieties. • Crop rotation: Crop rotation at suitable intervals is also effective in disease control.
