control valve is a valve used to control fluid flow by  
varying the size of the flow passage as directed by a  
signal from a controller. This enables the direct control

of flow rate and the consequential control of process quantities such as pressure, temperature, and liquid level.. In automatic control terminology, a control valve is termed a "final control element". Control valve - Wikipedia Fisher three-way valves control a wide range of process liquids, gases, and vapors in high pressure and critical service applications.
