These pro-grams include appliance testing programs, power turbine testing projects, and studies of specialized end uses, including non-combustion uses of natural gas.

This paper presents the status and general findings to date of these studies, which include TECHNICAL ISSUES AND RESEARCH NEEDS IN GAS ... Gas interchange in fluidized beds is characterized using two-fluid model simulations. For an isolated bubble, the simulations reproduce the potential flow theory. For bubbling regime, the potential flow underpredicts the simulated gas interchange. A novel model for 2D bubbles is proposed for bubbling regime. Gas interchange between bubble and emulsion phases in a 2D ... Background Venous blood gas (VBG) is frequently used in the

UNECE REGION Dramatic fluctuations in gas compositions will affect end-users. At current stage, studies on interchangeability indices, which are commonly utilized to characterize the interchangeability of natural gas, can resolve the dilemma. Experimental research on gas interchangeability indices ... Natural gas interchangeability is the key subject in the industry today and most recently Liquefied Natural Gas (LNG) has emerged as a major source and differs substantially from domestically produced gas. Interchangeability means the characteristics of a design that allow direct placement of one item without requiring any modification. THE STUDY OF INTERCHANGEABILITY IN LIQUEFIED

The ability of U.S. LNG importers to establish and maintain an acceptable level of interchangeability between vaporized LNG from any source and traditional pipeline gas, and the degree to which domestic natural gas users participate in, cooperate with, and ultimately facilitate these efforts, will in all likelihood have a significant impact on the degree to which LNG imports become a meaningful component of the overall domestic natural gas supply mix.
