Introduction to Algorithms Introduction to Algorithms Yes, I am coauthor of Introduction to Algorithms, along with Charles Leiserson, Ron Rivest, and Cliff Stein. For MIT Press's 50th anniversary, I wrote a post on their blog about the secret to writing a best-selling textbook. Here are answers to a few frequently asked questions about Introduction to Algorithms: Thomas H. Cormen Initialize all the values to a singly linked free list (flag set to false) with a head and tail pointer. On insert, use the memory pointed to by the head pointer and set the flag to true for the new element and increment the head pointer by one. On delete, set the flag to false and insert the newly freed memory at the tail of the linked list. Cormen:Introduction to Algorithms Solutions Introduction to Algorithms, the 'bible' of the field, is a comprehensive textbook covering the full spectrum of modern algorithms: from the fastest algorithms and data structures to polynomial-time algorithms for seemingly intractable problems, from classical algorithms in graph theory to special algorithms for string matching, computational geometry, and number theory. I am currently reading Cormen's famous Introduction to Algorithms book. However, I do not have a resource where I can verify my solutions to the exercises. I've tried to find something on Google, but everything I find is for the 2nd edition whereas I have the 3rd. Some problems are similar, but some aren't. I'd like to have a solutions manual for this specific book.
