Powder Coating Guide Powder coating requires either an oven or infrared heating in order to cure the powder. A household oven or even a toaster oven are great for smaller parts, but you will always be limited by the oven size. If you are interested in a smaller oven, check out the original oven article: Powder Coating Ovens. Powder Coating: The Complete Guide One 8-oz. bottle of powder covers the same area as 2-3 cans of spray paint, and clean-up is easy since you can simply sweep-up the oversprayed powder. Contains no environmentally harmful solvents. HotCoat powder coating requires a 5-10psi compressed air source and dedicated electric oven (or toaster

oven). The Ultimate Beginners Guide to Powder Coating Powder coating flows evenly when heated, so there is no area with an uneven coat. Paint usually is applied in multiple coats with two passes being the absolute minimum for acceptable coating. Powder coating can be applied by electrostatic spray from one to six millimeters thick in one pass. Powder Coating At Home: A How-To Guide For The Home Handyman Powder coating allows for much thicker coatings than liquid paint, without running or sagging. With liquid paint, horizontal and vertical painted surfaces often have differences in appearances, but powder coating typically provides a uniform visual appearance regardless of orientation. A GUIDE TO APPLYING
